RANGE DESK · DAILY INPUTS

One sheet for the kit bag. The full manual explains each step.

1 NIGHT BEFORE

1. Full view → **Match plan**: for each detail enter the date, time, range, distance, target, L/R, match, rifle and load, then **Add detail**
2. Check the forecast, opening dial, bracket and sun
3. **Print plot sheets** (Zoomed, Whole or Both)
4. Charge the tablet, Calypso, Weatherdot, Kestrel and Garmin

2 ARRIVE

1. Open the app with signal; **Range mode**; choose a **Look**
2. **Session:** shooter, type, **batch**
3. Connect the **Calypso** and **Weatherdot**; check them against the Kestrel
4. **Today's velocity:** the Garmin average
5. Set the Garmin, ShotMarker and GoPro clocks
6. New range? **Pin this firing point (GPS)** at two targets 30+ apart on one mound

3 EACH DETAIL

1. **Load this detail** (Next detail card)
2. **True the forecast on live wind**
3. Range the frame with the Sig, line of sight
4. Checklist: tap **Set** on anything amber
5. **Start string** before the first sighter
6. Tap each shot, with the dial it was fired on
7. Poor shot? **Called poor**. Aiming off? **Point of aim**
8. **End string** after the last counting shot

4 BETWEEN DETAILS

1. Read the **wind bracket**: lightest, strongest, best hold
2. Check **Today's wind factor** on the banner; it is carried into the next detail's opening automatically
3. Elevation off? **Correct from impact → Use the plotted group**
4. Note the light and mirage changes
5. The next detail is offered: **Load this detail**

5 BEFORE YOU LEAVE THE RANGE: CAPTURE THE FILES

What	How	Done
ShotMarker CSV and .tar	ShotMarker Wi-Fi → **192.168.100.1** → String Archive → tick your strings → **Export CSV**, then **Export**. Check Downloads and open the CSV. Never delete or edit on the hub.	☐
ShotMarker screenshots	Each string's target screen	☐
Garmin sessions	ShotView → export the day's sessions	☐
Calypso / Kestrel notes	Any side-by-side readings, and the light and conditions per detail	☐
Plot sheets	Photograph the hand-written sheets	☐
Range Desk data	Full view → Plotted shots → **Save all data to a file**	☐

6 AT HOME

1. Full view → **Import results**: choose the ShotMarker .tar and the Garmin file together, check the dials, then **Import**
2. **Records:** by batch, elevation against the app, **BC from velocity** (Use in load only after checking at the longer distances)
3. Save a data file and keep a copy off the tablet
